Research Summary

Metal beer kegs are cylindrical containers typically made of stainless steel or aluminum that are used to store and dispense beer in large quantities. They provide a durable and reusable solution for breweries, bars, and restaurants to transport and serve beer. Metal beer kegs come in various sizes, but the most common type is the standard half-barrel keg, also known as a full-size keg, which holds approximately 15.5 gallons or 58.7 liters of beer. These kegs are sealed to maintain the freshness and carbonation of the beer, and they feature a valve mechanism, often referred to as a "coupler," for dispensing the beer. The coupler attaches to a draft system, such as a tap or dispenser, allowing the beer to flow out under pressure when the valve is opened. Metal beer kegs offer advantages such as durability, ease of cleaning, and the ability to maintain the quality and taste of the beer throughout its shelf life. Additionally, they are environmentally friendly because they can be cleaned, refilled, and reused, reducing the need for disposable containers.

The major global manufacturers of Metal Beer Kegs include THIELMANN, Blefa GmbH
