Research Summary

Metal Brazing Paste is a specialized material used in the brazing process, where two or more metal components are joined together by melting a filler metal at a temperature above 450°C but below the melting point of the base metals. The paste typically consists of a mixture of metal powders, flux, and a binder, designed to create a strong, durable bond between metals such as steel, copper, aluminum, and their alloys. The flux component of the paste helps to clean the metal surfaces, preventing oxidation and ensuring a proper bond, while the metal powder serves as the filler material that flows into the joint, filling any gaps and solidifying to form a strong, permanent connection. Metal brazing paste is commonly used in applications like electronics, automotive, HVAC systems, and industrial machinery, where precision and high-strength joints are required. It offers advantages such as ease of application, minimal heat distortion, and the ability to join dissimilar metals.

The major global manufacturers of Metal Brazing Paste include Lucas-Milhaupt, H?gan?s, Voestalpine B?hler Welding, Asia General, Hongfeng Electrical Alloy

Company, Castolin Eutectic, Fusion, Prince & Izant, etc. The global players competition landscape in this report is divided into three tiers.
