Research Summary

Metal chrome, commonly referred to as chrome or chromium, is a metallic element with the atomic number 24 and the chemical symbol Cr. It is a lustrous, hard, and corrosion-resistant metal that is widely used in various industries. Chrome is known for its high reflectivity and shiny appearance, which make it a popular choice for decorative applications. It is commonly used as a plating material for objects such as car parts, bathroom fixtures, and household appliances to enhance their aesthetic appeal and provide a protective layer against corrosion. Additionally, chrome is used in various industrial applications, including automotive manufacturing, aerospace, construction, and electronics, due to its excellent resistance to heat, wear, and chemical attacks. It is also an essential component of stainless steel, forming a passive oxide layer that provides stainless steel with its corrosion resistance. However, it's important to note that hexavalent chromium, a toxic form of chromium, is a human health and environmental concern, and there are regulations in place to limit its use and ensure safe handling and disposal practices.

The major global manufacturers of Metal Chrome include CITIC Metal, Klyuchevsky, Delachaux (DCX Chrome), Novotroitsk, AMG Superalloys, JFE Material, GfE, Kohsei, Industrial Metallurgical Holding (Polema), Exotech, Shanxi Sirui New Materials, etc. The global players competition landscape in this report is divided into three tiers.
