Research Summary

Metal-clad switchgear refers to a type of electrical distribution system commonly used in medium to high-voltage applications. It consists of a metal enclosure that houses various electrical components, such as circuit breakers, busbars, disconnect switches, and control panels. The metal-clad design provides a robust and protective enclosure that enhances safety, reliability, and ease of maintenance. The metal enclosure is usually grounded and acts as a barrier, preventing accidental contact with live parts and shielding against the hazards of electric arcs and faults. Metal-clad switchgear is commonly used in commercial buildings, industrial facilities, power generation stations, and substations. It enables the control, protection, and isolation of electrical circuits, allowing for the safe and efficient distribution of electrical power. The modular nature of metal-clad switchgear allows for flexibility and ease of expansion, making it a popular choice for applications that require reliable power distribution and maximum uptime.

The major global manufacturers of Metal-Clad Switchgear include EKOSinerji, Eaton, GE Industrial Solutions, Siemens, ABB, Powell Industries, RIC Power Corp, Myers
