Research Summary

Metal composite panels, also known as metal composite materials (MCM) or simply composite panels, are architectural cladding systems consisting of multiple layers of different materials bonded together. The panels typically consist of a metal skin or sheet, such as aluminum, copper, or stainless steel, sandwiched between two layers of non-metallic materials, often a core of polyethylene (PE) or fire-retardant mineral core (FR). This combination of materials provides a lightweight yet rigid panel with excellent strength, durability, and fire resistance properties. Metal composite panels are widely used in the construction industry for both exterior and interior applications due to their versatility, aesthetic appeal, and performance characteristics. They offer a wide range of design options, including various colors, finishes, textures, and shapes, allowing for creative and striking architectural facades. Furthermore, these panels provide thermal insulation, weather resistance, and sound insulation properties, enhancing the energy efficiency and comfort of buildings. Metal composite panels have become popular as a modern cladding solution, offering a balance between functionality, versatility, and visual impact in architectural design.

The major global manufacturers of Metal Composite Panel include Mulk Holdings, 3A Composites, Jyi Shyang, Mitsubishi Plastic, Alcoa, Sistem Metal, Worlds Window Group, Almaxco, Aliberico Group, Kingspan Insulated Panels, Yaret, Hongtai Group, Goodsense, Seven Group, Willstrong, Likeair, Huaertai, Fangda Group, Pivot, etc. The global players competition landscape in this report is divided into three tiers.
