Research Summary

A metal detector is an electronic device designed to detect the presence of metallic objects in various materials, such as soil, water, or on a person's body. It consists of a control unit that contains a power source and circuitry, as well as a search coil or sensor responsible for transmitting and receiving electromagnetic signals. When a metal object comes within the range of the detector's electromagnetic field, it disrupts the field, causing the detector to emit an audible or visual signal indicating the presence of metal. Metal detectors have a wide range of applications, including security screening at airports and events, archaeology and treasure hunting, industrial inspections, and geological surveys. They come in various types and designs, from handheld devices for personal use to large-scale, stationary systems used in industrial environments. Metal detectors have proven to be valuable tools in a variety of industries, providing efficient and reliable means of locating and identifying metal objects.

The major global manufacturers of Metal Detector include Mettler-Toledo, Anritsu Infivis, Minebea Intec, Nissin Electronics, Sesotec, Multivac Group, Loma Systems, Thermo
