Research Summary

A metal disc filter, also known as a metal mesh filter or metal screen filter, is a type of filtration device used to separate solids from liquids or gases. It consists of a series of perforated metal discs or screens stacked together, forming a filtration media. The metal discs are typically made from stainless steel or other corrosion-resistant alloys and feature precise and uniform holes or mesh patterns. When a fluid containing solid particles flows through the filter, the metal discs trap the solids while allowing the liquid or gas to pass through. This filtration process effectively removes contaminants, sediment, or particulate matter from the fluid stream. Metal disc filters offer several advantages, including high durability, resistance to corrosion, easy cleaning and maintenance, and the ability to handle high temperatures and pressures. They are commonly used in applications such as water treatment, wastewater treatment, chemical processing, food and beverage production, and oil and gas refining, where efficient and reliable filtration is essential.

The major global manufacturers of Metal Disc Filter include Norman Filter Company,

Porvair Filtration Group, Saifilter, Kelba Agro Engineers (P) Ltd., Filson Filters, Porvair, Aaba International, Sidco Filter Company, etc. The global players competition landscape in this report is divided into three tiers.
