Research Summary

Additive Manufacturing with Metal Powders, also known as metal 3D printing or direct metal laser sintering (DMLS), is a process that uses a laser to fuse layers of metal powders to create a three-dimensional object. The process involves feeding a computer-aided design (CAD) file into a 3D printer, which then uses a laser beam to melt and fuse metal powder particles layer by layer until the desired shape is created. The resulting object is often stronger and more durable than those created with traditional manufacturing methods. This technology is widely used in the aerospace, automotive, medical, and jewelry industries.

The major global suppliers of Metal Powder Additive Manufacturing Printer include EOS GmbH, GE Additive, Farsoon Technologies, Bright Laser Technologies, HBD, Huake 3D, Renishaw, SLM, 3D Systems, Eplus3D, Exone, Xinjinghe, etc. The global players competition landscape in this report is divided into three tiers.
