Research Summary

A metal soft magnetic element, commonly known as a powder core, is a type of magnetic material used in electrical and electronic devices for its magnetic properties. Powder cores are composed of finely powdered magnetic materials, such as iron, iron alloys, or ferrite, that are compressed under high pressure to form a solid core shape. The powder core's unique structure allows it to exhibit high permeability, low hysteresis losses, and excellent magnetic properties, making it suitable for applications where efficient power transfer and effective magnetic shielding are required. Powder cores provide advantages such as low core losses, high efficiency, compact size, and reduced weight compared to other magnetic materials. They are commonly used as inductors, transformers, chokes, and filters in various electronic devices, including power supplies, telecommunications equipment, audio/video systems, and renewable energy applications. Powder cores offer design flexibility due to their ability to be easily shaped into different geometries, enabling customization and optimization for specific circuit requirements.

The major global manufacturers of Metal Soft Magnetic Element (Powder Core) include MAGNETICS, CSC (Changsung Corp.), POCO Magnetic, Hitachi, Micrometals, TDG, Dongbu Electronic Materials, Zhejiang KEDA Magnetolectricity (KDM), Samwha Electronics, DMEGC, Huzhou Careful Magnetism, Nanjing New Conda Magnetic Industrial, etc. The global players competition landscape in this report is divided into three tiers.
