Research Summary

Metallized film, also known as metalized polyester film, is a type of flexible packaging material that has been coated with a thin layer of metal, typically aluminum. This coating is applied using a process called vacuum metallization, where aluminum is vaporized and condensed onto the surface of the film, creating a thin, uniform layer. Metallized films are highly reflective and provide a shiny, metallic appearance. They offer various advantages in packaging applications, including enhanced barrier properties, improved shelf life, and visual appeal. The metal coating helps to block moisture, oxygen, and other gases, protecting the contents from spoilage or degradation. Additionally, metallized films provide excellent light and aroma barriers, making them suitable for packaging products sensitive to these factors. They are commonly used for food packaging, snack packaging, pharmaceutical packaging, and other consumer goods. Metallized films offer a cost-effective alternative to traditional metal foils while providing similar protective properties and a more flexible and lightweight solution.

The major global manufacturers of Metallized Film include Jindal Polyfilms, SRF Limited, Cosmo Films, Uflex, Impak Films USA, Ester Industries, Sumilon Polyester,

Polyplex, Polinas, etc. The global players competition landscape in this report is divided into three tiers.
