Research Summary

Methacrylic acid (MAA), with the chemical formula $C_4H_6O_2$, is an organic compound primarily used in the production of polymers and resins. It is a clear and colorless liquid with a strong and pungent odor. MAA is classified as an unsaturated carboxylic acid, containing a double bond between the carbon atoms adjacent to the carboxylic acid group. It is commonly employed as a building block in the synthesis of acrylic polymers and copolymers, such as poly(methyl methacrylate) (PMMA), which is widely used in various applications, including coatings, adhesives, and dental materials. Methacrylic acid's reactivity and functional group make it suitable for cross-linking reactions and polymerization processes. It is important to handle and store MAA with proper precautions due to its corrosive nature and the potential for skin and eye irritation. Safety measures, including the use of protective equipment, should be followed when working with this chemical compound.

The major global manufacturers of Methacrylic Acid (MAA) (CAS 79-41-4) include
