Research Summary

Methionine is an essential amino acid that plays a critical role in maintaining overall health and functioning of the body. It is one of the building blocks of proteins and is required for the synthesis of various important molecules in the body. Methionine cannot be produced by the body and must be obtained through the diet. It is found in protein-rich foods such as meat, fish, eggs, and dairy products, as well as in plant sources like legumes, nuts, and seeds. Methionine is involved in processes such as protein synthesis, methylation reactions, and the production of important molecules like glutathione, creatine, and adrenaline. It also serves as a precursor for the synthesis of another amino acid called cysteine. Methionine is necessary for the growth and repair of tissues, the production of collagen, the maintenance of healthy hair and nails, and the proper functioning of the immune system. It also acts as an antioxidant, helping to protect cells from damage caused by harmful free radicals.

The major global manufacturers of Methionine include Evonik, Adisseo (Bluestar), NOVUS, Sumitomo Chemical, CJ Cheiljedang Corp, Chongqing Unisplendour
