Research Summary

Methylal, also known as dimethoxymethane or formaldehyde dimethyl acetal, is a colorless liquid with a slightly sweet odor. It is a versatile organic compound used primarily as a solvent in various industries. Methylal has excellent solvent properties and is able to dissolve a wide range of polar and nonpolar substances. It is commonly employed in industries such as coatings, adhesives, and printing inks, where it helps to enhance viscosity, improve film formation, and control drying rates. Methylal also finds applications as a fuel additive to improve combustion efficiency and reduce emissions. Additionally, it serves as a starting material in the synthesis of other chemicals, such as formaldehyde and acetaldehyde. Methylal should be handled with care, as it is flammable and has low acute toxicity. Proper safety measures should be followed during storage, handling, and use to ensure safe and responsible usage.

The major global manufacturers of Methylal include Prefere Resins (INEOS), Kuraray, Lambiotte, Chemofarbe, Zhuhai Long Success Chemicals, Lieran, Zhejiang Longsheng Group, LCY Chemical, Anhui Jixi Sanming, Qingzhou Aoxing, etc. The global players competition landscape in this report is divided into three tiers.
