Research Summary

Methylene chloride, also known as dichloromethane (DCM), is an organic compound with the chemical formula CH_2Cl_2 . It is a colorless, volatile liquid with a sweet, chloroform-like odor. Methylene chloride is widely used as a solvent in various industrial applications. It has excellent solvency power and is particularly effective at dissolving a wide range of organic compounds, making it valuable in paint stripping, degreasing, and adhesive removal processes. It is also employed as a solvent in the production of pharmaceuticals, agrochemicals, and food processing. Methylene chloride is utilized as an extractant in the manufacturing of caffeine and herbal extracts. Moreover, it is utilized as a blowing agent in the production of polyurethane foams and as a refrigerant in certain applications. However, it is important to handle methylene chloride with caution, as it can be harmful if inhaled or absorbed through the skin. It should only be used in well-ventilated areas with proper protective measures in place to ensure worker safety.

The major global manufacturers of Methylene Chloride include Inovyn, Olin, Occidental
