Research Summary

Mg-Al-Zinc coated carbon steel, also known as Magnesium-Aluminum-Zinc coated carbon steel or simply MAGNAZINC, is a corrosion-resistant coating applied to carbon steel to enhance its durability and protection against environmental elements. This coating is achieved through a hot-dip process where the carbon steel substrate is immersed in a bath of molten magnesium, aluminum, and zinc alloys. The resulting coating forms a metallurgical bond with the steel substrate, providing a resilient barrier against corrosion. Mg-Al-Zinc coated carbon steel offers excellent corrosion resistance, even in severe environments, as well as superior heat resistance and long-term durability. It is commonly used in various industries, including automotive, construction, and manufacturing, for applications such as roofing, cladding, and structural components where corrosion resistance is of utmost importance. Additionally, Mg-Al-Zinc coated carbon steel offers self-healing properties, meaning that if the coating is damaged, it can naturally repair itself through the migration of alloy components across the surface, further enhancing its corrosion resistance over time.

The major global manufacturers of Mg-Al-Zinc Coated Carbon Steel include ArcelorMittal, NISSHIN STEEL, POSCO, NSSMC, Shandong Kerui Steel, etc. The global players competition landscape in this report is divided into three tiers.
