Research Summary

MI cable, short for Mineral Insulated cable, is a type of electrical cable used in applications where high temperatures, mechanical strength, and fire resistance are critical. MI cables consist of one or more conductors made of copper, nickel, or other conductive materials, surrounded by a mineral insulating powder such as magnesium oxide (MgO), and enclosed in a seamless metal sheath typically made of copper or stainless steel. The mineral insulation provides excellent electrical insulation properties while also offering exceptional thermal conductivity, allowing the cable to withstand extreme temperatures without degradation. MI cables are commonly used in industrial processes, petrochemical plants, power generation facilities, and hazardous environments where traditional cables would fail due to high temperatures or exposure to harsh conditions. They are also utilized in fire alarm systems, emergency lighting, and other safety-critical applications where reliability and performance are paramount.

The major global manufacturers of MI Cable include nVent, Okazaki Manufacturing, Jiusheng (TEC) Electric, KME, Yuancheng Cable, ISOMIL, Baosheng Group, MICC Group, Emerson, Uncomtech, Far East Cable, Jiangsu Shangshang Cable, Wuxi
