Research Summary

Micro-Electrical Mechanical Systems (MEMS) foundry services refer to the specialized manufacturing and fabrication processes used to produce MEMS devices on a commercial scale. MEMS devices are miniature, integrated systems that combine mechanical and electrical components on a microscopic scale. MEMS foundries offer a range of services, including design, prototyping, fabrication, testing, and packaging of MEMS devices. These foundries have specialized cleanroom facilities and equipment to handle the sophisticated processes required for MEMS fabrication, such as lithography, deposition, etching, and bonding techniques. They work closely with clients to translate their MEMS device designs into manufacturable products, optimizing performance, reliability, and yield. MEMS foundries are essential for bringing MEMS devices to market, enabling the mass production of diverse MEMS applications such as sensors, actuators, microfluidics, optical devices, and energy harvesting systems. By providing MEMS foundry services, manufacturers can leverage the expertise and infrastructure
