Research Summary

Micro-lens arrays refer to a collection of miniature lenses arranged in a regular pattern. These lenses are typically micrometer-sized and can be made from materials such as glass or polymer. The micro-lens array structure is designed to focus or direct light in specific ways. When light passes through the array, each individual lens focuses the incoming light onto a specific point or area, resulting in enhanced light manipulation capabilities. Micro-lens arrays find applications in various fields, including imaging systems, optical communications, 3D displays, augmented reality/virtual reality (AR/VR) devices, and light sensors. They allow for improved light collection, increased optical efficiency, reduction of aberrations, and the creation of unique optical effects. Additionally, micro-lens arrays can be used in combination with other technologies, such as image sensors or display panels, to enhance the overall performance and functionality of the optical system.

The major global manufacturers of Micro-Lens Arrays include Asahi Glass, Nippon Electric Glass, Nalux, Jenoptik, LIMO, Ingeneric, Sumita Optical Glass, Axetris, VIAVI
