Research Summary

Microalgae DHA refers to docosahexaenoic acid (DHA) derived from microalgae sources. DHA is an omega-3 fatty acid that is crucial for brain health, cognitive function, and overall well-being. While DHA is commonly found in fish oil, microalgae are the primary natural source of this fatty acid in the marine food chain. Microalgae DHA is produced through the cultivation and extraction of DHA-rich microalgae strains in controlled environments. It is often used as a dietary supplement, especially in vegan or vegetarian diets, where traditional DHA sources like fish oil are not consumed. Microalgae DHA supplements provide an alternative, sustainable, and plant-based source of this essential nutrient. They are commonly used to support brain development in infants, cognitive health in adults, and overall cardiovascular health. Additionally, microalgae DHA is often incorporated into functional foods, beverages, and infant formulas to enrich their nutritional value with omega-3 fatty acids.

The major global manufacturers of Microalgae DHA include DSM, Roquette, Corbion, Huison, Runke, ADM, Mara Renewables, Cabio, Solutex, Kingdomway, Fermentalg, JC
