### Research Summary

Microbial Enhanced Oil Recovery (MEOR) is a technique that utilizes microorganisms to enhance the recovery of oil from reservoirs. It involves the introduction of selected microorganisms or their by-products into oil reservoirs to alter the physical or chemical properties of the oil or the rock formation, thereby improving the flow of oil and increasing recovery rates. MEOR can involve the injection of microorganisms that produce biosurfactants, which reduce the surface tension of oil droplets, facilitating their movement through the rock pores. Another approach is the injection of microorganisms that produce gases like carbon dioxide, methane, or hydrogen, which help displace the oil and improve its mobility. MEOR can also involve the stimulation of indigenous microorganisms in the reservoir through the injection of nutrients, such as nitrogen or phosphorus, to enhance their biodegradation activity and increase oil recovery. Microbial Enhanced Oil Recovery offers a potential solution to increase oil production while reducing the environmental impact associated with traditional recovery methods, making it an area of ongoing research and application in the oil industry.

The major global suppliers of Microbial Enhanced Oil Recovery include StatOil, Titan Oil Recovery, Royal Dutch Shell, BP, ConocoPhillips, DuPont, Genome Prairie, CNPC, Chemiphase, Gulf Energy, etc. The global players competition landscape in this report is divided into three tiers.
