Research Summary

A microchannel heat exchanger is a compact and highly efficient device used for transferring heat between two fluid streams. It consists of a network of small channels, typically with dimensions ranging from micrometers to millimeters, through which the fluids flow. One fluid stream passes through one set of channels while another fluid stream flows through adjacent channels. Heat is transferred between the two streams through the thin walls of the channels, allowing for rapid and efficient heating or cooling of the fluids. Microchannel heat exchangers offer advantages such as high heat transfer rates, compact size, reduced fluid volume, and precise temperature control. They are commonly used in various industries, including automotive, aerospace, electronics cooling, and HVAC systems, where space constraints, energy efficiency, and precise thermal management are crucial.

The major global manufacturers of Microchannel Heat Exchanger include Sanhua (China), MAHLE (Germany), Denso Corporation (Japan), Modine (US), Hanon Systems (South Korea), Kangsheng Group (China), Kaltra (Deutschland), Climalmetal (Spain),
