Research Summary

Microfiber refers to a synthetic fiber that is extremely fine, typically having a diameter less than one denier, which is finer than the diameter of a human hair. It is primarily made from polyester, polyamide (nylon), or a blend of both. The ultrafine fibers are tightly woven or knitted to create a fabric with exceptional softness, durability, and absorbency. Microfiber fabrics have a unique structure that enables them to be highly effective in cleaning and absorbing moisture. They have a large surface area and microscopic spaces between the fibers, which allow them to trap and hold dust, dirt, and liquids more effectively than traditional fabrics. Microfiber is commonly used in various applications, such as cleaning cloths, towels, apparel, upholstery, and even in automotive detailing. It is known for its ability to clean without the need for chemical cleaners, as the fibers can grab and remove particles with just water. Its popularity stems from its ability to provide efficient cleaning, reduce lint and streaks, and enhance overall cleaning performance in a wide range of settings.

The major global manufacturers of Microfiber include Toray, Kuraray, Asahi Kasei, Kolon, Teijin, Sheng Hong Group, 3M, Eastman, Sanfang, KB Seiren, Hexin, Duksung,

Norwex, SISA, Acelon Chemical, Vileda, Huaфон Microfibre, Double Elephant, Wanhua, Far Eastern, Ningbo Green Textile, Tricol, Meisheng, Hengli, etc. The global players competition landscape in this report is divided into three tiers.
