Research Summary

Micropiles are small-diameter, high-strength piles used in foundation engineering to support structures in challenging or confined spaces. Typically made of steel or reinforced concrete, micropiles are drilled deep into the ground and grouted in place, providing a stable foundation in areas where traditional large-diameter piles cannot be used. These piles are ideal for projects involving weak or unstable soils, limited access sites, or when retrofitting or strengthening existing structures. Micropiles are commonly used in the construction of buildings, bridges, and retaining walls, as well as for seismic retrofitting and underpinning. Their versatility, quick installation, and ability to handle high loads make them an effective solution for a wide range of geotechnical applications.

The major global manufacturers of Micropiles include SSAB, Zekelman Industries, ArcelorMittal, Soletanche Bachy, TREVI SPA, DYWIDAG, JD Fields & Company, Nucor Skyline, Helifix, Minova, Terratest, MAGNUM, Comercial de Sondeos sl, Dextra Group, ISCHEBECK GMBH, Meever, Terra Infrastructure, Braxima Internacional, Geolsa-LTM, Intech Anchoring Systems, DSI Underground, IDEAL Foundation Systems, Centrum
