Research Summary

Microplate readers, also known as microplate spectrophotometers or plate readers, are laboratory instruments used to measure and analyze the contents of microplates. Microplates, also called microtiter plates, are flat rectangular or round plates with multiple wells arranged in a grid pattern. Each well can hold a small volume of liquid, typically ranging from tens to hundreds of microliters. Microplate readers utilize various detection technologies, such as absorbance, fluorescence, luminescence, and time-resolved fluorescence, to measure and analyze the samples in microplates. They are widely used in life science research, drug discovery, clinical diagnostics, and other applications where high-throughput analysis of samples is required. Microplate readers enable quantitative measurement of various biological and chemical processes, including enzyme activity, protein concentration, cell viability, DNA and RNA quantification, gene expression analysis, and drug assays. These instruments offer versatility, automation, and reproducibility, allowing researchers to efficiently analyze large numbers of samples in a relatively short time.

The major global manufacturers of Microplate Readers include Thermo Fisher Scientific,

PerkinElmer, Tecan, Agilent, BIO-RAD, Molecular Devices, BMG Labtech, KHB, Biochrom, Promega, Awareness, Berthold, Rayto, Perlong, Autobio, etc. The global players competition landscape in this report is divided into three tiers.
