Research Summary

Microplates, also known as microtiter plates or multiwell plates, are flat rectangular or round plates with multiple small wells arranged in a grid pattern. They are commonly made from polystyrene or glass and come in various sizes, with 96-well and 384-well formats being the most common. Each well in a microplate can hold a small volume of liquid, typically ranging from tens to hundreds of microliters. Microplates are widely used in laboratory settings for high-throughput screening, sample analysis, and experimentation in fields such as molecular biology, cell culture, drug discovery, and diagnostics. They provide a standardized platform for conducting multiple experiments simultaneously, allowing researchers to efficiently process and analyze a large number of samples in a compact and organized manner. Microplates are compatible with various laboratory instruments such as microplate readers, liquid handling robots, and automated pipetting systems, making them an essential tool for many scientific applications.

The major global manufacturers of Microplates include Thermo Fisher Scientific,
