### Research Summary

Mild Hyperbaric Oxygen (MHBOT) refers to a therapeutic treatment where an individual breathes pure oxygen in a pressurized environment, but at a lower pressure than traditional hyperbaric oxygen therapy (HBOT). In MHBOT, the pressure typically ranges from 1.3 to 1.5 atmospheres, which is higher than normal atmospheric pressure but not as intense as the 2 to 3 atmospheres used in standard HBOT. This treatment is used to enhance oxygen delivery to tissues, promoting healing and recovery by increasing the amount of oxygen dissolved in the bloodstream. MHBOT is thought to support the body's natural healing processes, improve circulation, reduce inflammation, and promote cell regeneration. It has gained popularity for treating a variety of conditions, including chronic pain, sports injuries, fatigue, and certain skin conditions, with fewer side effects than higher-pressure HBOT. Although research into its full range of benefits is ongoing, many people find MHBOT beneficial for overall wellness and recovery.
