Research Summary

Milk Protein Concentrate (MPC) is a dairy ingredient derived from milk that has undergone a process to extract and concentrate the proteins. It is produced by removing the water content from milk through processes like ultrafiltration and diafiltration. MPC typically contains a higher protein content compared to regular milk, with protein levels ranging from 40% to 90%, depending on the specific grade. It is valued for its functional properties, including solubility, emulsification, and gelation, which make it a versatile ingredient used in a variety of food products. MPC is widely used in the food industry as an ingredient in dairy products, nutritional supplements, sports drinks, infant formulas, bakery goods, and processed meats. It provides a source of high-quality proteins, including casein and whey proteins, which offer essential amino acids and contribute to the nutritional value and functionality of food products. Additionally, MPC offers texture, stability, and improved mouthfeel in various applications, making it a valuable component in food formulation and processing.
