### Research Summary

A milking liner, also known as a teat cup liner or inflation, is a crucial component of a milking machine used in dairy farming. It is a soft, rubber or silicone sleeve that is securely attached to the teat cups. When the milking machine is activated, the liner creates a vacuum and gently massages the cow's teat, stimulating milk flow. The milking liner creates a seal around the teat, preventing air from entering and ensuring that milk flows directly into the milk collection system. It is designed to mimic the natural suckling action of a calf, promoting efficient and complete milk removal from the udder. Milking liners are available in various shapes and sizes to accommodate different teat sizes and cow breeds. Proper maintenance and regular replacement of milking liners are essential to maintain milk quality, prevent mastitis, and ensure the comfort and well-being of the cow during the milking process.

The major global manufacturers of Milking Liner include Skellerup, Milkrite, GEA, Trelleborg Group, Boumatic, Pearson Milking Technology, DeLava, Lauren AgriSystems, DairyFlo, J.
