Research Summary

Mill liners are protective linings installed inside grinding mills, such as ball mills, SAG mills, and rod mills, to safeguard the integrity of the mill structure, enhance grinding efficiency, and reduce wear on the mill components. They are typically made of durable materials, including rubber, metal, or composite materials, and are designed to withstand the abrasive forces and impacts generated during the grinding process. Mill liners are available in various shapes, such as lifter bars, shell plates, and grate plates, and are customized to suit the specific requirements of each mill. They help optimize the grinding performance by promoting efficient ore breakage and preventing excessive abrasion between the grinding media and the mill shell. Mill liners require regular maintenance and periodic replacement to ensure the continued integrity and efficient operation of the grinding mill.

The major global manufacturers of Mill Liner include Me Elecmetal, Flsmidth, Trelleborg, Weir Group, Magotteaux, Rema Tip Top, Bradken, Multotec, Polycorp, Honyu Material, Fengxing, Tega Industries, Teknikum, Metso, etc. The global players competition landscape in this report is divided into three tiers.
