### Research Summary

Mirrorless cameras, also known as mirrorless interchangeable lens cameras (MILCs), are digital cameras that do not have a mirror reflex mechanism, unlike traditional DSLR cameras. This design eliminates the need for a mirror and optical viewfinder, allowing for a more compact and lightweight body. Mirrorless cameras use an electronic viewfinder (EVF) or the rear LCD screen to display the image, and they rely on an electronic sensor to capture images directly, offering faster autofocus and the ability to preview exposure and depth of field in real time. These cameras allow users to interchange lenses, offering flexibility in framing and composition. While traditionally less popular than DSLRs, mirrorless cameras have gained significant traction due to advancements in image quality, autofocus performance, and video capabilities. They are now widely used by both professional photographers and hobbyists for their portability, versatility, and ability to capture high-quality images in various settings.

The major global manufacturers of Mirrorless Cameras include Sony, Olympus, Fujifilm, Nikon, Cannon, Panasonic Lumix, Leica, Samsung, Hasselblad, Sigma, etc. The global players competition landscape in this report is divided into three tiers. The first tier
