### Research Summary

Mist collectors, also known as oil mist collectors or oil mist eliminators, are devices used to remove airborne oil mists and other liquid aerosols from industrial processes. These collectors are commonly employed in manufacturing facilities where processes such as machining, metalworking, and heat treatment generate oil mist or coolant mist that can be hazardous to both worker health and equipment. Mist collectors use various mechanisms such as filters, electrostatic precipitation, or centrifugal force to capture and separate the mist particles from the air. They typically consist of a housing, a filter or separation media, and a fan or blower that creates airflow through the collector. By effectively collecting and filtering out the oil mist, mist collectors help maintain clean air in the workplace, prevent the contamination of surrounding equipment, and reduce the risk of respiratory issues or fire hazards associated with airborne oil mist.

The major global manufacturers of Mist Collectors include Donaldson, Absolent, Nederman, Mann+Hummel, Filtermist, Showa Denki, Losma, Keller Lufttechnik, 3nine, Esta, Wuxi Bodhi, Aeroex Technologies, YHB, Shangyu Jinke, etc. The global players
