### Research Summary

A mist eliminator, also known as a demister or mist pad, is a device used to remove liquid droplets or mist from gas or vapor streams. It is commonly employed in industrial processes such as chemical manufacturing, oil refining, and power generation, where the presence of mist can hinder efficient operation or cause environmental or safety concerns. Mist eliminators typically consist of a bed of knitted or woven material, such as wire mesh or fiber matting, that acts as a barrier to trap and coalesce the mist droplets. The gas or vapor flows through the mist eliminator, and the captured liquid droplets coalesce into larger droplets that eventually drain away. The cleaned gas or vapor stream exits the mist eliminator with reduced mist content. Mist eliminators help improve process efficiency, protect downstream equipment, and prevent mist emissions into the environment. They are available in various configurations and materials to suit different applications and are often designed for easy installation and maintenance.

The major global manufacturers of Mist Eliminator include Air Quality Engineering, Aeroex, AMACS, Boegger Industrial, Champion, Coastal Technologies, FABCO-AIR,

Geovent, Koch-Glitsch, Industrial Maid, MECS, Mikropor, Met-Pro Environmental Air Solutions, Munters, Ningbo T.C.I, Pneumatic Product, etc. The global players competition landscape in this report is divided into three tiers.
