Research Summary

A mobile C-arm X-ray machine is a portable imaging device used in medical settings for intraoperative imaging and interventional procedures. It consists of two main components: a C-shaped arm and an X-ray source connected to an image intensifier or flat panel detector. The C-arm can be easily maneuvered and positioned around the patient to capture real-time X-ray images from different angles. This mobility allows for imaging during surgical procedures, such as orthopedic surgeries, vascular interventions, cardiac procedures, and pain management. The X-ray images produced by mobile C-arm machines provide valuable information for surgeons and interventionalists, enabling them to visualize anatomical structures, guide procedures, and assess the placement of medical devices or implants in real-time. The portable nature of mobile C-arm X-ray machines makes them flexible and adaptable to various clinical settings, including operating rooms, clinics, emergency departments, and intensive care units. They are essential tools in modern healthcare, improving patient care, surgical accuracy, and reducing the need for additional imaging and radiation exposure.

The major global manufacturers of Mobile C-arm X-RAY Machine include GE Healthcare, Siemens, Philips, Ziehm Imaging, Shimadzu, Hologic, Nanjing Perlove Medical Equipment, United Imaging, SternMed, Beijing Wandong Dingli Medical Equipment, Kangda Intercontinental Medical Equipment, etc. The global players competition landscape in this report is divided into three tiers.
