Research Summary

A Mobile Pallet Racking System is a storage solution designed to maximize warehouse efficiency by providing high-density storage and easy accessibility to palletized goods. Unlike traditional static pallet racking, which requires fixed aisles between rows of racking, mobile pallet racking utilizes a mechanical or electric system that allows racks to move laterally along tracks installed on the warehouse floor. By eliminating the need for multiple aisles, mobile pallet racking significantly increases the storage capacity within a given space. The system operates by creating a movable aisle. When an operator needs to retrieve or add pallets, the racking units open the designated aisle by moving the racks to the side. This aisle can then be accessed by forklifts or other material handling equipment. The mobility of the system not only optimizes storage capacity but also improves selectivity, as specific pallets can be easily accessed. Mobile pallet racking systems are commonly used in warehouses and distribution centers with high-density storage requirements, offering a space-saving and efficient solution for managing large quantities of palletized goods.

The major global manufacturers of Mobile Pallet Racking System include Averys, SSI SCHAEFER, Daifuku, Jungheinrich, Mecalux, Bito, Montel, Murata Machinery, Ridg-U-Rak, AR Racking, Huade, Abu Yousuf, Nedcon, Constructor Group, TKSL, JINGXING, Inform, NOEGA SYSTEMS, Nanjing Kingmore, etc. The global players competition landscape in this report is divided into three tiers.
