Research Summary

Modified asphalt emulsion refers to a type of asphalt emulsion that has been blended with various modifiers to enhance its performance properties. Asphalt emulsion is a mixture of asphalt, water, and an emulsifying agent, which forms a stable suspension of asphalt droplets in water. The addition of modifiers, such as polymers, additives, or other agents, alters the properties of the emulsion to improve its durability, elasticity, viscosity, adhesion, and resistance to aging and cracking. The modifiers can enhance the performance of the asphalt emulsion for specific applications, such as road construction, pavement repair, surface treatments, and waterproofing. Modified asphalt emulsion is commonly used in the construction industry as a cost-effective and environmentally friendly alternative to traditional asphalt mixes, providing enhanced performance and longevity in various weather and traffic conditions.

The major global manufacturers of Modified Asphalt Emulsion include Total, ExxonMobil, Sinopec, BPCL, Gazprom Neft, Shell, SK, Tipco Asphalt, Nynas, Colas, Baolirus, Guochuang Hi-Tech, Nichireki, etc. The global players competition landscape
