Research Summary

Modified Atmosphere Packaging (MAP) is a packaging technique used to extend the shelf life and maintain the quality of perishable food products. This process involves modifying the atmosphere within a packaged product by altering the levels of oxygen, carbon dioxide, and nitrogen. The packaging is designed to create a barrier and control the gas composition around the product. By reducing oxygen levels and increasing carbon dioxide and nitrogen levels, MAP inhibits the growth of spoilage-causing microorganisms, slows down enzymatic reactions, and helps preserve the freshness and flavor of the food. The specific gas composition and packaging materials used depend on the type of product and its requirements. MAP is widely used for various food items, such as fresh produce, meat, seafood, bakery goods, and ready-to-eat meals, to extend their shelf life, reduce waste, and ensure product safety and quality throughout the supply chain.

The major global manufacturers of Modified Atmospheric Packaging include Amcor, Amcor, Coveris, Linde, CVP Systems, Total Packaging Solutions, DuPont, Berry

Plastics, Sealed Air, Dansensor, Wipak, Praxair, Ilapak Packaging Machinery, etc. The global players competition landscape in this report is divided into three tiers.
