### Research Summary

Modified Polyimide (MPI) is a type of polymeric material derived from polyimide, which is a high-performance polymer known for its exceptional thermal stability, mechanical strength, and chemical resistance. MPI is produced by introducing modifications or additives to the polyimide structure, which can alter its properties and enhance its performance characteristics. These modifications can include the introduction of various functional groups or the incorporation of other polymers to improve flexibility, adhesion, or processability. Modified Polyimide offers advantages such as improved film-forming ability, reduced brittleness, increased flexibility, or enhanced adhesion to other materials. It finds applications in a wide range of industries, including aerospace, electronics, automotive, and coatings, where its combination of thermal resistance, mechanical strength, and tailored properties make it suitable for high-temperature environments, electrical insulation, or demanding operating conditions.

The major global manufacturers of Modified Polyimide (MPI) include Dupont, Kaneka, Mitsubishi Chemical, Ttamide, Mortech, PI Advanced Materials, UBE INDUSTRIES,
