### Research Summary

Modified polypropylene refers to a form of polypropylene that has been chemically or physically modified to enhance its properties or add new functionalities. Polypropylene is a thermoplastic polymer known for its high strength, impact resistance, and chemical stability. Modifications to polypropylene can be achieved through processes such as compounding, blending, or the introduction of additives during manufacturing. These modifications can impart characteristics like improved impact strength, flexibility, UV resistance, flame retardancy, thermal stability, or compatibility with other materials. Modified polypropylene finds applications in various industries, including automotive, packaging, construction, and electronics, where its enhanced properties make it suitable for specific requirements or performance demands. Whether it is through copolymerization, blending with other polymers, or incorporating fillers or reinforcements, modified polypropylene expands the range of applications and utilization of polypropylene beyond its base properties.

The major global manufacturers of Modified Polypropylene include LG Chem, Hanwha

Total Petrochemical, Silver Age Sci &tech, KINGFA SCI. & TECH, Shanghai Pret Composites, SABIC, RTP Company, Avient, Nanjing Julong Science & Technology, Shandong Dawn Polymer, Qingdao Gon Technology, etc. The global players competition landscape in this report is divided into three tiers.
