Research Summary

Molybdenum powder is a fine, grayish-black metallic powder composed of molybdenum atoms. It is produced by various methods, including reduction of molybdenum compounds or by grinding solid molybdenum into a powder form. Molybdenum powder is known for its exceptional properties, such as high melting point, excellent thermal conductivity, and good corrosion resistance. These properties make it valuable in a range of applications. For instance, molybdenum powder is commonly used as an alloying element in the production of high-strength steels and superalloys, which find application in aerospace, automotive, and oil and gas industries. It is also used as a lubricant additive, as it can withstand high temperatures and reduce friction and wear. Furthermore, molybdenum powder is utilized in the manufacture of electrical contacts, electrodes for electric discharge machining (EDM), and as a precursor for other molybdenum compounds. Its versatility and desirable properties make molybdenum powder a crucial material in numerous industrial sectors.

The major global manufacturers of Molybdenum Powder include H.C. Starck, Molymet,

Plansee, Exploiter, JDC-Moly, Toshiba, Japan New Metal, China Molybdenum, Dongtai Fengfeng, etc. The global players competition landscape in this report is divided into three tiers.
