Research Summary

Monocrystalline silicon PERC (Passivated Emitter Rear Cell) solar modules are a type of photovoltaic (PV) technology that combines monocrystalline silicon solar cells with the PERC design. Monocrystalline silicon solar cells are made from a single crystal structure, offering higher efficiency due to their uniform and ordered arrangement of atoms. The PERC technology involves the passivation of the cell's rear surface, reducing electron and hole recombination and enhancing overall cell performance. In mono silicon PERC solar modules, this combination results in a highly efficient and reliable solar energy conversion system. These modules are known for their ability to efficiently capture sunlight and convert it into electricity, making them a popular choice for residential, commercial, and industrial solar installations where space efficiency and high energy yield are crucial considerations.

The major global manufacturers of Mono silicon PERC Solar Modules include Tongwei, Canadian Solar Panels, LONGI, Aionrise, Evolve Energy, Aiko Solar, Jinko Solar, Q CELLS, REC Group, SunPower, Xantrex, Navitas, Solarever, SolarWorld, Innolia, Adani
