### Research Summary

Monofilament refers to a single, continuous strand or filament of a material, typically a synthetic polymer such as nylon, polyethylene, or polyester. It is characterized by its uniform diameter and smooth surface, often resembling a thin thread or fishing line. Monofilament is commonly used in various applications due to its strength, durability, and flexibility. In fishing, monofilament lines are widely used as fishing lines due to their high tensile strength, low visibility in water, and excellent knot strength. In the textile industry, monofilament is used in the production of fabrics, nets, and mesh materials. It is also utilized in the manufacturing of bristles for brushes, toothbrushes, and in the creation of various industrial and consumer products that require a single, continuous fiber. Additionally, monofilament finds applications in medical sutures, filtration systems, and as reinforcing fibers in composites. Its versatility and unique properties make monofilament a valuable material in a wide range of industries.

The major global manufacturers of Monofilament include Ri-Thai, Perlon, NTEC, Monosuisse, Tai Hing, Ruichang Special Monofilament, Jintong, VitasheetGroup,
