Research Summary

Mortar is a building material widely used in construction and masonry work. It is a mixture of cement, sand, and water that is used to bind together bricks, stones, or other building units to create a solid and durable structure. The cement acts as the binding agent, while the sand provides bulk and helps to fill the gaps between the building units. Upon mixing with water, the mortar mixture becomes workable and can be applied with a trowel or similar tool. Once applied, mortar hardens and cures over time, creating a strong bond between the building units. Mortar is essential in construction as it provides stability, load-bearing capacity, and weather resistance to the overall structure.

Variations in the ratio of cement to sand can be made to create different types of mortar, each suitable for specific applications and conditions.

The major global manufacturers of Mortar include Saint-Gobain Weber, Materis, Sika, Henkel, Mapei, Sto, Ardex, BASF, Baumit, Bostik, Knauf, CBP, Caparol, Cemex, Dryvit Systems, Hanil Cement, HB Fuller, Quick-mix, AdePlast, Forbo, CPI Mortars, Grupo Puma, Tarmac, etc. The global players competition landscape in this report is divided into three tiers.
