Research Summary

Mosquito killer lamps, also known as mosquito killer lights or mosquito trap lamps, are devices designed to attract and eliminate mosquitoes. These lamps typically feature an ultraviolet light source, often in the form of LED lights, which emit light at a specific wavelength that attracts mosquitoes. The light simulates the infrared radiation emitted by humans and animals, drawing mosquitoes towards the lamp. Some mosquito killer lamps also emit specific scents or use other attractants to increase their effectiveness. Once the mosquitoes are lured close to the lamp, they are either electrocuted by a high-voltage grid or trapped in a container or netting within the device. The electrocution method typically uses an electric grid that delivers a high-voltage shock when the mosquitoes come into contact with the grid. The trapped mosquitoes can then be disposed of later, reducing the mosquito population in the surrounding area. Mosquito killer lamps are commonly used in indoor and outdoor settings, providing a convenient and environmentally friendly option for controlling mosquito populations and reducing the nuisance and potential health risks associated with mosquitoes. It's important to note that while mosquito killer lamps can be effective in reducing mosquito populations, they may not eliminate all mosquitoes in an area, and it's advisable to combine their

use with other mosquito control measures for comprehensive protection.

The major global manufacturers of Mosquito Killer Lamps include Woodstream Corporation, Panchao, Chuangji, INVICTUS International, Armatron International, Greenyellow, Thermacell Repellents, Remaig, TONMAS, etc. The global players competition landscape in this report is divided into three tiers.
