### Research Summary

Motion capture gloves, also known as mocap gloves or data gloves, are specialized devices worn on the hands to capture and track the movement and gestures of the fingers and hands in real-time. These gloves are equipped with sensors and markers that can detect and record the positions and orientations of individual fingers and hand movements. The sensors may use various technologies, such as optical, magnetic, or inertial tracking systems, to accurately track the glove's movements. Motion capture gloves are commonly used in areas like animation, virtual reality, gaming, robotics, biomechanics, and human-computer interaction. They enable precise and natural hand and finger motion capture, allowing for realistic and expressive character animation, interactive hand gestures in virtual environments, accurate movement analysis, and control of virtual or robotic hands. The collected data from motion capture gloves can be used for research, animation production, game development, training simulations, and other applications requiring accurate and detailed hand and finger movement tracking.
