### Research Summary

Motion sensor lights, also known as motion-activated lights or motion-detector lights, are lighting fixtures equipped with sensors that detect movement in their surrounding area. These lights are designed to automatically turn on when they sense motion and provide illumination for a specific duration before turning off again. Motion sensor lights are commonly used for security purposes as they can detect motion and alert homeowners or occupants of potential intruders or suspicious activity. They are also used for convenience and energy-saving purposes in areas such as driveways, pathways, stairs, and outdoor spaces. The sensors in motion sensor lights can utilize various technologies such as infrared (IR), microwave, or passive infrared (PIR) to detect changes in heat or movement. This enables them to activate the lights when someone enters the sensor's range, providing instant illumination and increased visibility in the detected area. The duration of the lights staying on after motion detection can often be adjusted, and some models also offer features like adjustable sensitivity, dusk-to-dawn operation, and different lighting modes for customization.

The major global manufacturers of Motion Sensor Lights include OSRAM, Philips, Panasonic, GE, Siemens, Mr Beams, First Alert, Heath Zenith, RAB Lighting, MAXSA Innovations, Halo (Eaton), etc. The global players competition landscape in this report is divided into three tiers.
