Research Summary

A motor grader, also known as a road grader or simply a grader, is a heavy construction machine with a long blade positioned between the front and rear axles. It is primarily used in the construction and maintenance of roads, highways, and large earthworks projects. The motor grader is equipped with a powerful engine and hydraulically controlled blades that can be angled, lifted, and lowered. The main purpose of a motor grader is to create a flat or level surface by removing excess material, such as rocks, dirt, and debris, and spreading it evenly across the desired area. This machine is well-suited for tasks like road grading, leveling, and maintaining a consistent slope, allowing for smooth driving conditions and proper water drainage on roads. Motor graders can also be used for other tasks like removing snow or spreading materials like gravel. They are highly maneuverable and have excellent control, thanks to their articulated frame that enables movement and precision steering.

The major global manufacturers of Motor Grader include Caterpillar, VOLVO, Komatsu, John Deere, CASE, Terex, XCMG, Changlin, Dingsheng Tiangong, Shantui, LiuGong, SANY, Sahm, etc. The global players competition landscape in this report is divided into
