Research Summary

Motorized linear actuators are devices used to convert rotational motion into linear motion, providing precise and controlled movement in various applications. They consist of an electric motor, a lead screw or ball screw, and a nut assembly. The electric motor drives the rotation of the screw, which translates that rotational motion into linear motion through the thread mechanism. Motorized linear actuators offer advantages such as high positioning accuracy, repeatability, and the ability to automate processes. They are commonly used in industrial automation, robotics, medical equipment, automotive systems, and many other fields where linear movement is required. Motorized linear actuators come in different sizes, load capacities, speeds, and stroke lengths to accommodate a wide range of applications. They provide a reliable and efficient solution for precise linear motion control, allowing for improved productivity, accuracy, and versatility in various industries.

The major global manufacturers of Motorized Linear Actuators include Parker, EMERSON, LINAK, THK, ABB, SKF, IAI, Honeywell, Auma, Tsubakimoto Chain,
