Research Summary

Movable walls, also known as flexible or demountable walls, are partitions or panels that can be easily reconfigured or relocated within a space to create flexible room divisions. These walls are designed to be movable rather than fixed in place, allowing for adaptability and customization of interior spaces. Movable walls offer several benefits, including the ability to maximize the use of space by creating temporary rooms or dividing larger areas into smaller sections as needed. They are commonly used in commercial and office environments, conference rooms, hotels, schools, and other settings where the layout and functionality of a space may need to be changed frequently. Movable walls come in various designs, such as folding, sliding, or modular systems, and they can be made from different materials, including glass, metal, or wood, providing both aesthetic appeal and functionality.
