### Research Summary

MPO (Multi-fiber Push-On) fiber optic connectors are widely used in high-density fiber optic networks and data centers. They are designed to provide a reliable and efficient connection for multiple fibers in a single connector. The MPO connector features a rectangular ferrule with multiple fibers aligned in a precise array. The standard MPO connector can accommodate 12, 24, or 48 fibers, although variations exist with different fiber counts. The connector utilizes a push-pull mechanism, allowing for quick and easy insertion and removal of the connector without the need for additional tools. MPO connectors are commonly used for high-speed data transmission applications, such as 40G and 100G Ethernet, as well as for parallel optic applications like multi-fiber interconnects. With their compact size and high fiber density, MPO connectors are an efficient solution for organizations that require fast and reliable connectivity in dense network environments.

The major global manufacturers of MPO Fiber Optic Connector include T&S Communications, US Conec, Senko, Siemon, Amphenol, Sumitomo Electric, Suzhou
