### Research Summary

MS resin, also known as SMMA (styrene methyl methacrylate), is a type of transparent thermoplastic polymer that combines the properties of styrene and methyl methacrylate. It is commonly used as a substitute for standard acrylics, offering improved impact resistance and toughness while maintaining high transparency. MS resin exhibits excellent clarity, allowing for optical applications where optical transparency is essential. It also possesses good chemical resistance, weatherability, and heat resistance, making it suitable for various indoor and outdoor applications. Additionally, MS resin has a high flow rate, which enables the production of intricate and detailed molded parts. Due to its desirable properties, MS resin is often utilized in the manufacturing of automotive parts, electronic components, medical devices, consumer goods, and other applications that require a combination of transparency, impact resistance, and chemical resistance.

The major global manufacturers of MS Resin (SMMA) include Denka, Chi Mei, Nippon Steel & Sumikin, INEOS Styrolution, A. Schulman (Network Polymers), LG MMA, Resirene, Deltech Polymers, etc. The global players competition landscape in this
